EDUCATION

VIT University **2023 – 2027**
B.Tech in Computer Science, CGPA: 8.80 / 10

SKILLS

Languages & Databases: Python, SQL, C++, MySQL, Data Cleaning & Preprocessing
Machine Learning & Analytics: Pandas, NumPy, scikit-learn, Exploratory Data Analysis, Predictive Analytics
GenAI & Frameworks: LangChain, LangGraph, Foundational Models, RAG, Prompt Engineering
Visualization & BI: Power BI, Matplotlib, Excel (PivotTables, VLOOKUP)

PROJECTS

E-Commerce Customer Churn & Lifetime Value Analysis | *Python, SQL, Pandas, Power BI*

- Performed exploratory data analysis and cohort analysis on 100K+ transactional records to identify customer drop-off patterns and retention trends.
- Engineered RFM (Recency, Frequency, Monetary) metrics using SQL queries to segment customer profiles and calculate Customer Lifetime Value (CLV).
- Designed an interactive Power BI dashboard tracking key churn indicators, providing actionable insights to boost customer retention.

AI-Powered Shopping Assistant | *Python, Web Scraping, NLP*

- Built a data pipeline to extract and structure real-time product and pricing data from e-commerce sites.
- Applied NLP techniques to parse user queries and match them against structured product data.
- Analyzed pricing and discount patterns to surface the best options, reducing user browsing time.

Neural-Networks-Ahoy: Ship Classification System | *Python, Deep Learning, CNN, TensorFlow*

- Built and evaluated a CNN-based image classification model on satellite and radar imagery datasets.
- Analyzed model performance using classification accuracy and error metrics to guide feature extraction improvements.
- Translated model outputs into insights supporting maritime surveillance and logistics use cases.

CERTIFICATIONS

Google Data Analytics Professional Certificate

- Mastered core data analysis processes, including SQL data cleaning, exploratory data analysis, and Tableau visualization for large, real-world datasets.

Data Analysis with Python (IBM / FreeCodeCamp)

- Gained expertise in data manipulation with Pandas and NumPy, data wrangling, and predictive/statistical analysis with SciPy.

Applied Machine Learning in Python

- Completed coursework on supervised learning, model evaluation, and feature engineering applicable to predictive risk modeling.
